

XoomConnect Managed Integration Platform as a service

-  Accelerate and simplify your Coupa & ERP integration
-  Remove the worry of ongoing platform management

Need to integrate Coupa into your ERP but not sure how?

Your financial systems are the backbone of your business and integrating Coupa into these systems can be a real headache if you don't have the right strategy, experience and tools. It can become a constant migraine if it isn't maintained properly in the long term. That's where Xoomworks' Managed Integration Platform as a Service, XoomConnect comes in.

What is XoomConnect?

XoomConnect is Xoomworks' managed integration platform as a service (MIPaaS), a CoupaLink certified platform that accelerates and simplifies the technical integration between your Coupa system and ERP(s); saving you time and money through implementation and significantly lowering ongoing maintenance cost and resource once your solution is live.

We can accelerate the integration of Coupa with your ERP(s) with the plug and play deployment of XoomConnect, much faster and less costly than having to engage an additional third party to build your integration from scratch. Using XoomConnect and integration experts from Xoomworks, we can integrate with virtually any ERP, ensuring you're up and running quickly in the short term, and making the most out of your Coupa investment long term.

What do you get with XoomConnect?

Once you are live with Coupa, XoomConnect takes it a step further by owning, managing and dealing with the ongoing maintenance of your integration layer – taking all of this effort off of your internal teams. On top of error handling management, if anomalies are identified our experts will proactively investigate and mitigate these before they become bigger problems. Some of the key parts of this service are:

- Running hourly checks with our 'Pulse' health-check system
- Integration monitoring via dashboards and notifications
- Instant email notification of any integration errors
- Integration error resolution
- Weekly or monthly statistical reporting

How XoomConnect works

Pre-built adaptors: You can save time and money by replacing or working alongside your existing middleware and leveraging our pre-built adapters and configurations for many ERPs.

Management Layer: The platform includes a robust management layer to administer the connected systems in your environment, including the platform dashboard, integration history logs, ETL Logic, mapping of data fields, scheduling of individual master and transactional data integrations as well as error handling tools.

Libraries: XoomConnect provides pre-built plugin libraries installed on your ERP instance to retrieve the required master data and post business transactions.

Blueprint: XoomConnect provides templated Coupa configurations in the form of blueprints, pre-built with the financial and organizational data models for many of the common ERPs.

Connectivity: Supporting integration build acceleration for the most common ERPs, XoomConnect will work with any ERP able to integrate via standard integration protocols meaning you don't have to build connections from scratch using expensive internal or 3rd party resources.

Key benefits

Saves time and money: by reducing integration and maintenance effort. XoomConnect is built as a plug and play tool with efficient maintenance.

Manages your integration for you: With Xoomworks managing the platform there is no need for you to train and assign IT resource to manage the platform once live.

Reduces risk by using a proven solution: Integrating the different systems in your landscape as part of a Coupa implementation can be time consuming and expensive. It is also the most common phase of a project that results in delays. XoomConnect mitigates that risk by using a tried and tested long-term solution.

ERP independent: XoomConnect integrates with many ERP technologies such as IDOC and BAPI's for SAP ECC & S/4HANA. It is also able to integrate with any systems using API or flat files.

Accelerated implementation: XoomConnect uses tried and tested plugins (Coupa, middleware, ERP-side) to provide easy to create connections, so we can advise you on selecting the elements you really need and get you up and running in no time!

Implemented with expertise: As procurement specialists, we are experienced in Coupa and Systems Integration and we can advise on the best managed solution that fits your requirements.

Continuous upgrading and maintenance: Because XoomConnect is hosted in the cloud, it is updated and rigorously tested for new technology releases from Coupa, keeping your systems working seamlessly and meaning you have one less thing to worry about. XoomConnect gets recertified with CoupaLink for each new Coupa release.

Speeds up error resolution: With Xoomworks managing the platform for you, there will be constant monitoring complementing automated notifications to ensure that if errors occur that they are picked up and dealt with quickly.

Why Xoomworks and XoomConnect?

Xoomworks has been implementing and integrating procurement solutions into businesses for years. This means we understand very clearly where you are likely to face the biggest challenges and impacts on your projects.

Every business has a different technical landscape, different finance systems,

different resourcing constraints and different technical skillsets, but that doesn't mean the integration journey needs to start from a clean sheet of paper.

Using our integration experience from many successful projects we have developed the XoomConnect platform to not just accelerate

and simplify integration between Coupa and your ERP systems but also ensure business continuity in your ongoing P2P journey.

Going live with your solution is just the beginning, maintaining the solution is the long-term struggle that no-one talks about until it becomes a problem.
